LIBERTY PRO-LIGHT

PRO-LIGHT MOBILE SOLAR LIGHTING TOWER

The award-winning Pro-Light is the only mobile solar lighting tower in the UK that operates reliably all year round, even in challenging winter conditions.

**ZERO
CARBON**

No fumes or greenhouse gas emissions

**ZERO
FUEL**

No diesel costs, spills, or refueling

**ZERO
MAINTENANCE**

Technology allows you to set up and forget

**ZERO
NOISE**

Benefits for urban locations and night projects

LIBERTY PRO-LIGHT

The award-winning Pro-Light is the only mobile solar lighting tower in the UK that operates reliably all year round, even in challenging winter conditions. The Pro-Light is the cost-saving alternative to diesel-generator tower lights that's easy to set up - and forget. The Pro-Light never needs to be refuelled, so you save money and manpower, while it continues to provide powerful light with no noise, polluting emissions, or danger of spills.

TRUSTED, SMART AND SAFE

The Pro-Light offers a high-performance, low operating-cost alternative to diesel generator lighting. The trailer-mounted battery has three times the capacity of any other temporary solar trailer light on the market, so that even on winter days with 16 hours of darkness, the unit operates consistently and reliably.

REMOTE CONTROL AND MONITORING

Every Pro-Light is fitted with a micro-controller and tracking facility, so it can be switched on and off remotely, and key data such as power generated/ consumed and light on/ off settings, monitored and recorded. You can change the settings to suit the light conditions without attending on site - or we can do it for you.

Customers can be provided with real-time web portal access

to Liberty's Remote Monitoring Service and we also provide a daily monitoring and control service to optimise the performance of each unit. Regular reports can be provided to track performance and carbon saved compared to conventional alternatives

MAST SAFETY SYSTEM

The Pro-light Automatic Mast Safety System (PAMS) is a fail-safe system that stops a light from being moved with the mast raised, avoiding danger

to personnel including inadvertent striking of overhead powerlines. The mast cannot be raised when the handbrake is on and is automatically lowered when the handbrake is released, e.g. before driving away

LIGHTING DESIGN SERVICE

Pro-light offers a full lighting design service to ensure you have the optimum temporary lighting configuration for your site.

APPLICATIONS

Infrastructure & construction projects
Site welfare compounds & walkways. Temporary car parks,
Off-grid emergency response,
Outdoor events and festivals

- Lux level: Min 20
- Lumens: 10,000 to 40,000
- Purpose developed, trailer-mounted power unit
- 4 x LED floodlights
- 4 x 380W foldable solar panels
- 7.5m telescopic mast
- Heavy-duty, deep-cycle batter technology

Available for hire or purchase.
